Graph Neural Networks for Molecular Property Prediction

Abstract
We present a deep learning approach using Graph Convolutional Networks (GCN) to predict molecular toxicity with high a

Introduction
Predicting molecular properties early in the drug discovery pipeline reduces costs and accelerates development. Tradition

Methodology
Molecules are represented as undirected graphs G=(V,E) where nodes V represent atoms and edges E represent chemic

Results
Our model achieves AUC-ROC of 0.94 on Tox21 and 0.91 on BBBP. Ablation studies confirm attention-based readout co

Conclusion
Graph neural networks are powerful tools for molecular property prediction. The proposed architecture generalizes across
